

Saanvi Sethi

+44 7491 160775 | saanvi.sethi19@gmail.com | xynox19.github.io

Profile

Computer Science with AI graduate with experience across software development, cloud technologies, and cybersecurity, gained through industry placements, technical projects, and customer-facing roles. Skilled in Python, SQL, Linux, Windows, and Oracle Cloud Infrastructure, with a proven ability to troubleshoot issues, deliver solutions, and collaborate in fast-paced environments. Seeking a long-term career in IT, software and cybersecurity.

Work Experience

Student Ambassador, Coventry University *Nov 2025 - Current*

- Welcomed and supported prospective and new students at Open Days, Induction, and campus events, delivering tours and acting as a first point of contact.
- Assisted 90+ students & graduates with enrolment, responding to queries in person and via call campaigns.
- Supported events, administrative tasks, and worked in teams to ensure a positive student experience

Intern, Civica Ltd. UK *Jul 2025 - Aug 2025*

- Facilitated OPAC system configuration, 313 support tickets, & created 9 KBAs alongside the Libraries Team.
- Conducted several successful meetings with education consortia to gather user insights & requirements.
- Created account plan summaries for SELMS & presented long-term enhancement plans for contract holders.
- Worked on OPAC feature development, attended sprint planning, and received training in UI styling.

Social Media Executive Officer, CyberWomen Coventry *Sep 2024 - Apr 2025*

- Delivered cybersecurity & cloud workshops to cohorts of 20+ students of diverse backgrounds.
- Led multiple cybersecurity and cloud workshops for over 120 students; coordinated outreach with 25 tech companies through expos, communicating with CEOs and inviting them for uni-based workshops.
- Advertised events through the university via LinkedIn, Instagram, Discord & other social media platforms.

Work Experience, Three UK *Jun 2024*

- Observed operations of mobile core networks, billing systems, 5G networks and incident teams.
- Rotated through Business Analysis, Incident Response, Solution/Domain Architecture, Retail, Web/Software Development, Sales, Marketing, Cybersecurity, Automation Testing and Project Management.
- Shadowed professionals in a live environment, learning how a telecom company operates behind the scenes

Work Experience, Airbus *Jun 2022*

- Participated in 5 interdisciplinary case studies simulating engineering and development challenges.
- Explored work in aerospace and aeronautic engineering, legal teams, and IT software operations.

Work Experience, Wood PLC. *Apr 2021*

- Analysed and created sustainable civil engineering solutions for UK fuel systems and energy grids.
- Presented on case studies on the oil industry & how engineering could prevent environmental damages.
- Presented 2 reports on CAPEX and impacts of green technologies for fossil fuel deals, winning best report.

Volunteer, Ek-Asha Charity *Summer 2020 & 2021*

- Taught Scratch and Python fundamentals to 50+ students in Odia and English from around the world.
 - Fundraised & built an orphanage in Odisha with computer labs for STEM education in remote villages.
-

Education

Coventry University | BSc Computer Science (First Class Honours), *Sep 2023 - Jul 2026*

Key Modules: Big Data/SQL, AI, Operating Systems, Advanced Algorithms, Software Engineering, Data Science, Theory of Computation, OS, Security, MQTT, Mathematics, Machine Learning, Cybersecurity, ANN,

Kendrick School | Secondary + Higher Education, *2016-2023*

11 Higher GCSEs + Physics, Maths and Chemistry A Levels

Saanvi Sethi

+44 7491 160775 | saanvi.sethi19@gmail.com | xynox19.github.io

Technical Skills

Programming: Python, C++, SQL, MATLAB, JavaScript, HTML/CSS, Assembly (x86), PHP
Tools: GitHub, VS Code, SQLite, RapidMiner, DreamWeaver, SolidWorks, Blender, Altair AI

OS: Linux (Debian and Kali), Windows, iOS
Other: MS Office, LinkedIn Content Creation, Fuzzy Logic Systems, MQTT, JSON, Oracle CI and Data, Medibang, Figma, VirtualBox, PowerBI, Tensorflow

Relevant Projects

TalentLens (demo/draft)

GitHub Repository

- Built a full-stack AI job-search tool that fetches live job listings, parses a CV into a structured skill profile, and scores roles against it for match percentage
- Integrated the Claude API to generate tailored cover letters and interview prep questions on demand
- Built with Python (Flask) backend and a zero-build React frontend including a background refresh loop.

KomodoHub Website

GitHub Repository

- Designed a responsive website to raise awareness about Komodo dragon conservation efforts
- Built using HTML, CSS, Python (Flask) and JavaScript with interactive components and educational content
- Focused on clean UI/UX design and content accessibility for diverse audiences
- Utilised Agile methodologies to organise efforts within the group & cycled development roles for experience
- ISO 9241-210 utilised throughout the project

E-Commerce Site implementing cybersecurity measures

GitHub Repository

- E-commerce website simulation with security measures coded from scratch into a Flask web-application
- Built using Werkzeug, Pillow, logging, Flask using only Python, SQL and HTML
- Utilises 2FA, CSRF tokens, SQL injection prevention, upload restrictions, logging, and more for security

Continuous Threat Exposure Management vs Traditional Threat Management Dissertation

Ask for Demo + Thesis (currently off public Github due to university regulations)

- Project with Python, CSV data simulations, and Dockerised vulnerable API testbed that evaluates attack surface, VM scanning, vulnerability scanning, and pentesting workflows for risk exposure and remediation.
- Implemented modular pipeline to process attack_simulations.csv, compute metrics_summary.csv, and generate comparative plots in order to determine speed, efficiency and difference in optimisation.
- Delivered reproducible evidence of CTEM risk reduction and practical decision-support results for academic/public security use, supported by academic and article literature reviews and testing.

MQTT Smart Home Simulation Application (for Mobile and Web)

GitHub Repository

- Developed a Python-based smart home simulation using MQTT and object-oriented programming
- Integrated virtual motion, camera, light, and temperature sensors to simulate environmental awareness mimicking usage of IoT within households, aided with controls and feedback from the application
- Designed for modularity and scalability for any sensors added in future to support automation logic

Certifications & Achievements

- | | |
|--|--|
| - MATLAB Machine Learning Certification | - HarvardEx CS50's Introduction to Programming with Python |
| - Pandas/Dask Python Certificate | - Forage Investment Banking Simulation |
| - ISC2 CC – Certified in Cybersecurity (in progress) | - HarvardEx CS50 Cybersecurity |
| - UK Space Design Competition Regional Winner 2022 | - Oracle CI Foundations Associate |
| - Computational Physics Course (BPhO) | |
